

NICHOLAS MEAT INFORMATION BRIEF

Sustainable Resource Facility

A tract of land just north of the current Nicholas Meat plant is the future home of the planned Sustainable Resource Facility (SRF).

The SRF features award-winning waste-to-energy technology and an advanced wastewater treatment facility. The new system will significantly change the management of wastewater and food processing residuals.

Benefits include:

- Anaerobic digesters create renewable energy, replacing fossil fuels, decreasing carbon footprint
- Digestion occurs in an enclosed environment, capturing greenhouse gases and odors
- Water treatment system maximizes water reuse, reducing water demand
- Digested solids become nutrient-rich fertilizer for farmland
- Truck traffic is reduced
- Odor is minimized

MORE DETAILED INFORMATION ABOUT THE SUSTAINABLE RESOURCE FACILITY IS AVAILABLE AT
